# JPY Cash Reconciliation Guide

Synthetic Cedar Works internal guide | FY2026 Q1 | March 2026 anchor case

## Purpose and cadence

Prepare a bank-to-ledger reconciliation for account 1000 at each month end. Use JPY throughout, retain the source extract and bank record, and identify each bridge component by amount, owner, and expected clearing date.

## March 2026 anchor reconciliation

| Starting point / bridge | JPY (m) | Effect on difference |
|---|---|---|
| Bank cash | 486.2 | Starting balance |
| Ledger cash | 498.6 | Starting balance |
| Outstanding payments | 7.2 | Bridge component |
| Deposits in transit | 3.1 | Bridge component |
| Bank fees not yet posted | 1.3 | Bridge component |
| Timing differences | 0.8 | Bridge component |
| Unfavorable difference | 12.4 | Requires documented review |

## Interpretation

**Anchor result: ledger cash exceeds bank cash by JPY 12.4m. Treat this as unfavorable until the four bridge components are documented, approved, and tracked to clearing or adjustment.**

## Preparation steps

1. Obtain the period-end bank record and the ERP general ledger extract for account 1000.
2. Tie each starting balance to its source, then list outstanding payments, deposits in transit, fees not yet posted, and other supported timing differences.
3. Verify the bridge totals JPY 12.4m; attach source references and expected clearing dates.
4. Route the result under materiality policy: this anchor exceeds the JPY 10.0m escalated tier and requires controller and CFO-role review before sign-off.

## Reviewer checks

| Check | Acceptance criterion |
|---|---|
| Arithmetic | Bridge components total JPY 12.4m. |
| Completeness | No unexplained difference remains after the bridge. |
| Timing | Each item has a period rationale and expected clearing or adjustment date. |
| Approval | Preparer and independent reviewer roles are recorded; escalated review is present. |
