AC-27 Vulnerability Register Vulnerability Register Exception Age Assurance Report

Artifact ID	p03-full-001003
Artifact review period	2026-07-20
Direct dependency record period	2026-q3
Direct dependency	2026-q3-vulnerability-register-exception-age-evidence-metrics-csv-s002937.csv

Review purpose and boundary

This synthetic assurance review evaluates the direct-source vulnerability register exception age record for Cobalt Harbor Systems under Aegis Control AC-27. The artifact is assigned to 2026-07-20; its direct source record is separately dated 2026-q3. The record contains 1 structured row(s), and is treated as bounded evidence rather than a live system export.

Direct dependency facts

Field	Recorded value
artifact id	p03-full-002937
source id	p03-src-002937
ledger path	security/vulnerabilities/foundation/data/2026-q3-vulnerability-register-exception-age-evidence-metrics-csv-s002937.csv
record period	2026-q3
register topic	vulnerability register exception age
disposition context	exception-age records the one-calendar-day EXC-260713-006 compensating-review window and closure status
positive spine refs	org.cobalt-harbor = Cobalt Harbor Systems is a fictional managed logistics and harbor-operations platform organization. | risk.risk-031 = RISK-031 is incomplete quarterly privileged-access review evidence; inherent High and residual Medium after bounded remediation. | period.2026-q3 = 2026-Q3 is the governance planning period from 2026-07-01 through 2026-09-30.
organization	Cobalt Harbor Systems
control	AC-27
review date	2026-07-13
evidence set	184
case id	CASE-260713-184
risk id	RISK-031
residual rating	Medium
exception id	EXC-260713-006
action id	ACT-260713-011
reviewed records	48
timely attestations	47
final completion rate	100.0%
status	closed_with_follow_up

Assessment question

Assessment question: does the direct-source vulnerability register exception age record support a bounded AC-27 chronology checkpoint / risk linkage checkpoint / risk-to-treatment route?

Test method: trace the recorded exception through its disposition context; then constrain risk wording to the recorded identifier and rating through the risk-to-treatment route.

Analytic rationale: A chronology review reads exception language in sequence and does not invent intervening events. Evidence procedure: Risk wording is limited to what the direct record supplies about treatment and residual state. This artifact uses the risk-to-treatment route to keep its decision bounded. Procedural safeguard: Read the risk identifier before using a treatment or residual-risk phrase.

Finding: the source identifies vulnerability register exception age and states exception-age records the one-calendar-day EXC-260713-006 compensating-review window and closure status. It records 48 reviewed records, 47 timely attestations, final completion of 100.0%, and status closed_with_follow_up. These values are retained as recorded evidence, not inferred operational results.

Decision and follow-up: retain this synthetic derivative for the next GRC evidence-chain check because the stated chronology checkpoint / risk linkage checkpoint / risk-to-treatment route is documented. Re-evaluate against the same direct record before any later retention or closure decision; do not generalize this review to a live environment.

Boundary: this report establishes no Kio indexing, search, history, chunk, or performance claim.
