

AC-27 Assurance Report: Traceability check

p03-src-005517 | 2026-07-20 | RISK-031

AC-27 Assurance Report: Traceability check

Record reference: AC-27/p03-full-005517

Assigned review context: 2026-07-20

Traceability check

The report asks whether the risk label provides enough basis for an exception-routing check. It is synthetic defensive GRC evidence for Cobalt Harbor Systems and makes no Kio indexing, search, or readiness claim.

Source evidence narrative

The source evidence is artifact p03-full-001049 from the 2026 Q3 source record period, stored in 2026-q3-intake-checksum-receipt-evidence-metrics-tsv-s001049.tsv. Record ID INB-013 was reviewed on 2026-07-13 under control AC-27 for audit request AR-260713-027 and case CASE-260713-184.

Evidence Set 184 addresses RISK-031. Its disposition is synthetic intake normalized; bounded review retained, its review period is 2026-Q3, and its unique marker is foundation-b001-013. Cobalt Harbor Systems maintains this traceability as a bounded intake record.

Record-specific assessment

Control evidence should contain only fields needed for an accountable review decision. For this record, the reasoned result is hold for clarification. Assigned period: 2026-07-20; source period: 2026 Q3. These remain separate facts, so the assigned context never replaces the source record period. Reference: AC-27/p03-full-005517.

Control-owner action

Keep the evidence slice bounded. If an unverified control reference appears, it would weaken the closure rationale. The record-specific safeguard is to preserve the linkage in the review rationale; that preserves an accountable decision without inventing a missing fact. Remove repeated export fields after reviewer confirmation. The report requests no elevated access, customer data, or execution instruction.

Artifact-specific analysis

For identity lifecycle control, verification was assessed through decision trace. The review considered whether the evidence documented in AC-27 Assurance Report: Traceability check supports the RISK-031 assurance decision. The documented outcome is that Cobalt Harbor documented the control conclusion for AC-27 Assurance Report: Traceability check. The limiting counterexample is that the record distinguishes offline documentary evidence from an instruction to operate a system. Checkpoint qualified endorsement; chronology constrained joiner; and mover informed leaver. The evidence method mapped retention evidence, tested contradictory indicators, and established control traceability.

Declared control context

Declared control context: audit ar-260713-027.

The review timing is 2026-07-20.

Cobalt Harbor owns the documented assurance review.

The evidence relationship is audit request-027.

The evidence is offline and makes no Kio capability claim.
