2026 Q3 Intake Checksum Receipt Assurance Report Pdf Text S003425

Aegis Control AC-27 | Searchable controlled review record | Synthetic internal evidence

Artifact	p03-full-003425
Scope	downloads/inbox
Request	AR-260713-027
Evidence set	184
Control	Aegis AC-27

Source and question

Direct dependency p03-full-000667 supplies INB-008: case CASE-260713-184, evidence set 184, risk RISK-031, marker foundation-b001-008, and disposition "synthetic intake normalized; bounded review retained". This checksum receipt asks whether to confirm the supplied checksum receipt is retained with the original intake reference.

Evidence reasoning

On 2026-07-13, INB-008 linked AR-260713-027 to AC-27. Apply the traceability lens: compare record ID, case, and request fields before accepting the control record. The ordered route is evidence-set boundary; then request linkage; then risk context; then review timing; it preserves source context without treating RISK-031 as closed or remediated.

Decision and actions

Decision: retain the receipt as a verification anchor before any evidence handoff. Retain p03-full-000667, preserve the source date and marker foundation-b001-008, and escalate conflicting metadata to the evidence owner. Do not add credentials, customer material, or production-access instructions.

Bounded conclusion

The checksum receipt is suitable for synthetic AC-27 documentation handling when its record, case, risk, disposition, and marker remain linked. This is not a Kio indexing, search, readiness, or control-effectiveness assertion.
