2026 Q3 Intake Request Attachment Assurance Report Pdf Text S004264

Aegis Control AC-27 | Searchable controlled review record | Synthetic internal evidence

Artifact	p03-full-004264
Scope	downloads/inbox
Request	AR-260713-027
Evidence set	184
Control	Aegis AC-27

Source and question

Direct dependency p03-full-000536 supplies INB-006: case CASE-260713-184, evidence set 184, risk RISK-031, marker foundation-b001-006, and disposition "synthetic intake normalized; bounded review retained". This request attachment asks whether to test whether the attachment record preserves the request-to-evidence relationship.

Evidence reasoning

On 2026-07-14, INB-006 linked AR-260713-027 to AC-27. Apply the control linkage lens: tie the evidence set and risk reference to AC-27 without converting the intake record into a risk decision. The ordered route is request linkage; then risk context; then disposition wording; then request linkage; it preserves source context without treating RISK-031 as closed or remediated.

Decision and actions

Decision: keep the attachment bound to its request and send only the minimized review copy. Retain p03-full-000536, preserve the source date and marker foundation-b001-006, and escalate conflicting metadata to the evidence owner. Do not add credentials, customer material, or production-access instructions.

Bounded conclusion

The request attachment is suitable for synthetic AC-27 documentation handling when its record, case, risk, disposition, and marker remain linked. This is not a Kio indexing, search, readiness, or control-effectiveness assertion.
