

# AC-27 Evidence Review Record

Bounded control-evidence report: review population | p03-full-001858

| Field                         | Observed synthetic value      |
|-------------------------------|-------------------------------|
| Assigned review date / period | 2026-07-13                    |
| Dependency source date        | 2026-07-14                    |
| Source artifact               | p03-full-002005               |
| Evidence card                 | EV-184-14                     |
| Review stage                  | normalization                 |
| Case / risk                   | CASE-260713-184 / RISK-031    |
| Control                       | Cobalt Harbor Systems / AC-27 |

## Review conclusion

This artifact is explicitly assigned to 2026-07-13. Its dependency source date is separately recorded as 2026-07-14. Evidence set 184 is represented as a bounded synthetic package. The supplied source records 48 reviewed privileged-role entries, with 47 timely attestations prior to compensating review and a final completion rate of 100.0%.

## Control and exception boundary

AC-27 requires preparer and reviewer role separation for exception dispositions. RISK-031 is retained as residual Medium; the report records governance evidence only and makes no incident, exploitation, or live-access claim.

## Evidence-chain handling

24/24 required synthetic items are verified for this bounded review. Retain the reference to EV-184-14 and its source artifact p03-full-002005 under the synthetic 18-month minimum. The supplied working-paper sequence is 2005.

## Reviewer actions

1. Match the case, control, and evidence identifiers to the source record.
2. Confirm that the completion measure remains a percentage of the 48-record synthetic population.
3. Preserve the compensating-review history without rewriting the missed timely attestation.
4. Route only the residual governance risk for the documented follow-up.
