

Alpha Adjudication Charter

Independent review framework | synthetic only

Charter

This wholly synthetic internal document supports the Sakura Clinical Study Alpha 2026 snapshot dated 2026-09-02. The cohort is 48 participants: 24 assigned to SC-A 2.5 mg and 24 matched controls. It is not clinical advice and contains no personal or patient information.

Membership

A three-role synthetic panel reviews endpoint interpretation, deviations, and safety summaries. No member receives individual-identifying material.

Decision standard

The panel documents evidence considered, uncertainty, consensus status, and required follow-up. Clinical decisions are out of scope.

Escalation

Potential serious events, material deviations, or data integrity concerns are routed to governance within one business day in this simulated workflow.
