

Analysis Population Specification

Study Alpha 2026 | Snapshot population definition

Population set

This wholly synthetic internal document supports the Sakura Clinical Study Alpha 2026 snapshot dated 2026-09-02. The cohort is 48 participants: 24 assigned to SC-A 2.5 mg and 24 matched controls. It is not clinical advice and contains no personal or patient information.

Primary set

All 48 synthetic records with Day 0 and Day 28 values: 24 SC-A 2.5 mg and 24 matched control.

Supportive sets

Protocol-consistent and sensitivity sets retain aggregate status flags only. No real participants or clinical records are represented.

Reporting

All comparisons are reported at group level. The 2.5 mg reference is a protocol review threshold, not clinical advice.
