

2.5 mg Protocol Review Threshold Rationale

Operational rationale; not clinical advice

Context

This wholly synthetic internal document supports the Sakura Clinical Study Alpha 2026 snapshot dated 2026-09-02. The cohort is 48 participants: 24 assigned to SC-A 2.5 mg and 24 matched controls. It is not clinical advice and contains no personal or patient information.

Rationale

The 2.5 mg label is a synthetic protocol review threshold used to organize monitoring and version control. It does not establish safety, efficacy, dosing, or care guidance.

Review triggers

Aggregate completeness, deviation status, and safety signal reconciliation are assessed at scheduled governance reviews.

Guardrail

This document may not be used to guide prescribing, participant care, or real-world medication handling.
