

Statistical Considerations

Study Alpha 2026 | synthetic descriptive analysis

Analysis objective

This wholly synthetic internal document supports the Sakura Clinical Study Alpha 2026 snapshot dated 2026-09-02. The cohort is 48 participants: 24 assigned to SC-A 2.5 mg and 24 matched controls. It is not clinical advice and contains no personal or patient information.

Model

Adjusted between-group difference at Day 28 with a prespecified matched-control comparison. Report estimate, 95% confidence interval, and population count.

Snapshot

Mean change: -4.8 (SC-A 2.5 mg) versus -2.1 (control); adjusted difference -2.7 (95% CI -4.1 to -1.3).

Interpretation boundary

Outputs are synthetic training data. The 2.5 mg threshold is not clinical advice and no clinical inference should be drawn.
