

Sakura Clinical Protocol Governance

Synthetic governance standard | 2026-09-02

Standard

This wholly synthetic internal document supports the Sakura Clinical Study Alpha 2026 snapshot dated 2026-09-02. The cohort is 48 participants: 24 assigned to SC-A 2.5 mg and 24 matched controls. It is not clinical advice and contains no personal or patient information.

Control principles

Controlled versions, traceable review notes, independent adjudication, and documented deviations protect the integrity of the synthetic record.

Accountability

Protocol governance owns version release; study operations owns execution records; analytics owns aggregate reproducibility.

Safety statement

Seven non-serious synthetic adverse events across six participants and zero serious adverse events are reported for the snapshot only.
