

Clinical study report summary

Sakura Clinical | Study Alpha 2026 | Results snapshot: 2026-09-02

Purpose

The locked synthetic analysis set contains 48 randomized and analysis cases: 24 SC-A 2.5 mg and 24 Matched control. Day-28 mean change was -4.8 versus -2.1; the adjusted difference was -2.7 (95% CI -4.1 to -1.3).

Safety

Seven non-serious adverse events occurred across six SC-A 2.5 mg synthetic participants. No serious adverse events were recorded.

Use limitation

This is a synthetic workflow document. The 2.5 mg value is a protocol review threshold, not medical advice.

Metric	SC-A 2.5 mg	Matched control	Result
Analysis cases	24	24	48 total
Day-28 mean change	-4.8	-2.1	Adjusted difference -2.7
Serious adverse events	0	0	0 total
