

Synthetic Data Dictionary

Sakura Clinical | Study Alpha 2026 | Aggregate cohort: 48 | Threshold: 2.5 mg

Scope

This dictionary describes a fictional, non-identifying training dataset for Sakura Clinical Study Alpha 2026. Values are examples for local reference handling and must not be interpreted as patient information or clinical recommendations.

Field specification

Field	Type	Allowed synthetic values	Purpose
record_key	text	ALPHA-001 to ALPHA-048	Non-identifying row key
cohort_flag	text	C48	Aggregate cohort grouping
review_state	text	draft reviewed archived	Workflow placeholder
threshold_mg	decimal	2.5	Reference threshold only
snapshot_date	date	2026-09-02	Frozen reference date
analysis_set	text	synthetic_full	Non-clinical analysis grouping
source_class	text	register form summary	Reference provenance class

Handling notes

The dataset is synthetic. The cohort count is 48 at the aggregate level. The value 2.5 mg is retained solely as a study-reference threshold and carries no dosing or treatment instruction.
