
Sakura Clinical Alpha Analysis Guideline

SC-ALPHA-GOV-26 | Snapshot 2026-09-02 | Synthetic cohort: 48

Purpose. A compact operating guide for consistent synthetic analysis notes.

All examples are synthetic. The 2.5 mg threshold is protocol governance, not medical advice.

Scope and boundary

This original synthetic guide governs internal study documentation language only. It does not reproduce a real standard or clinical guideline.

Use the shared snapshot date, Study Alpha 2026 label, and synthetic cohort count of 48 in linked records.

Procedure

Confirm the source record is a synthetic study artifact before review.

Record the guideline version and route material through the decision tree when a standard path is unclear.

Quality check

A reviewer verifies naming, snapshot alignment, and absence of real PHI before the record is registered.
