
Synthetic Adverse Event Coding Guideline

SC-ALPHA-GOV-26 | Snapshot 2026-09-02 | Synthetic cohort: 48

Purpose. A governance vocabulary for fictional event records; it does not diagnose, treat, or advise.

All examples are synthetic. The 2.5 mg threshold is protocol governance, not medical advice.

Coding boundary

Classify only synthetic observations generated for Study Alpha 2026. Never transpose real patient narratives.

Use neutral terms: observation, timing window, review state, and documentation completeness.

Review sequence

Confirm synthetic source; assign provisional category; seek independent review for ambiguity; register the final category and version.

Escalation note

A threshold comparison at 2.5 mg is a protocol-governance trigger only, not a medical recommendation.
