

Sakura Clinical Study Alpha 2026

A Phase 2a, Multi-Center, Open-Label Study to Evaluate the Safety, Tolerability, and Pharmacokinetics of SKA-126 in Healthy Adults

J.T., M.K., R.S., L.P., A.H., D.C., Y.W., P.G.

BACKGROUND:

SKA-126 is an investigational oral small molecule designed to modulate cellular stress response pathways. This first-in-human study evaluates safety, tolerability, and pharmacokinetics across ascending dose cohorts.

METHODS:

Open-label, single ascending dose design in healthy adults aged 18-45 years with BMI 18.5-28.0 kg/m². Each cohort includes 8 participants (6 active, 2 sentinel safety). Safety assessments through Day 7. Pharmacokinetics through 48 hours post-dose. Dose escalation proceeds after Safety Review Committee approval.

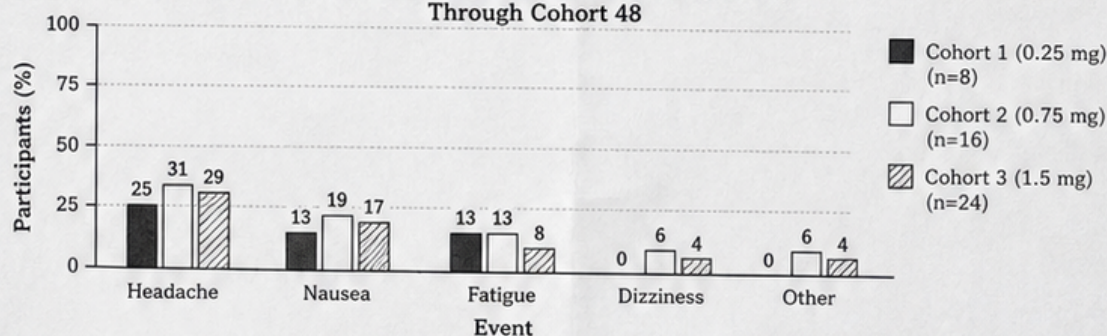

Planned Enrollment: 64 participants
Cohort Size: 8 participants
Cohorts: 1 (0.25 mg), 2 (0.75 mg), 3 (1.5 mg), 4 (2.5 mg), 5 (3.5 mg), 6 (5.0 mg)
Route: Oral
Dosing: Single dose, fasted
Primary Objectives: Safety and tolerability
Secondary Objectives: Pharmacokinetics (C_{max} , AUC_{0-48} , $T_{1/2}$)

6 cohorts planned

RESULTS (Through Cohort 48):

Forty-eight participants have been dosed across the first three cohorts. No serious adverse events have been reported. All adverse events were mild and resolved.

Treatment-Emergent Adverse Events (TEAEs)
Through Cohort 48

Pharmacokinetics (Geometric Mean):

Cohort (Dose)	C_{max} (ng/mL)	AUC_{0-48} (ng·h/mL)	$T_{1/2}$ (h)
1 (0.25 mg)	38.7	215	8.1
2 (0.75 mg)	112.4	629	8.3
3 (1.5 mg)	245.6	1382	8.6

PK appears dose-proportional

CONCLUSIONS:

SKA-126 was safe and well tolerated through Cohort 48. PK parameters increased approximately dose-proportionally from 0.25 mg to 1.5 mg. Dose escalation to Cohort 4 (2.5 mg) is planned pending review.

PROTOCOL REVIEW THRESHOLD:

A protocol review will be required prior to dosing at or above 2.5 mg.
