

Study Alpha Bibliography Commentary

Annotated fictional source register | prepared 2026-09-02

Scope note

All studies, sources, authors, and evidence in this document are fictional synthetic training material. Not medical advice. Review anchor: cohort 48; protocol review threshold: 2.5 mg.

Bibliographic policy

Every item cited below is an original synthetic work created for Study Alpha training. Titles, author initials, source labels, and findings are fictional and must not be matched to real journals or databases.

Commentary

- Alpha-A: strongest internal design framing, but only a training summary.
- Alpha-B: useful exposure narrative around the 2.5 mg review threshold; interpret without efficacy claims.
- Alpha-C: exploratory crossover description; retain as a counterweight to directional narratives.
- Alpha-D: context-only retrospective description with deliberate confounding limitations.

Use

The bibliography supports transparent internal provenance and review discussion. It does not validate a safety conclusion or support medical decision-making.

Synthetic evidence register

Source	Design	Population	Finding	Use in review
Alpha-A (synthetic)	Parallel comparison	Cohort 48	Directional endpoint pattern; uncertainty remains	Context only
Alpha-B (synthetic)	Open-label sequence	Cohort 48	Exposure pattern reviewed through 2.5 mg	Threshold discussion
Alpha-C (synthetic)	Crossover note	Completers subset	Inconclusive exploratory signal	Sensitivity check
Alpha-D (synthetic)	Retrospective summary	Aggregate records	Confounding limits interpretation	Not decision-grade

Decision boundary: this file supports an internal fictional protocol review only. It does not establish care, dosing, diagnosis, or safety guidance.
