

Benefit-Risk Summary

Study Alpha 2026 | synthetic training submission packet | snapshot 2026-09-02

Study frame	Sakura Clinical / Study Alpha 2026
Cohort	48 synthetic records; 24 SC-A 2.5 mg / 24 matched control
Use limitation	Training only; not a regulated filing or clinical recommendation

Benefit summary

In this fictional snapshot, the synthetic Day-28 symptom-index mean change was -4.8 for SC-A 2.5 mg and -2.1 for matched control. The adjusted difference was -2.7 (95% CI -4.1 to -1.3). These values are invented for training and do not establish a clinical effect.

Safety summary

The synthetic safety listing contains seven non-serious adverse events across six synthetic participants and zero synthetic serious adverse events. The listing has no real patient, site, or investigational-product information.

Interpretation and guardrail

The 2.5 mg value is a protocol-defined review threshold used to organize this synthetic packet. It is not dosing advice and must not be used for care, prescribing, or regulatory decision-making.

Training conclusion

For packet-completeness training, the fabricated benefit and safety observations are presented together with their limitations. No external action is requested or implied.
