

Sakura Clinical Study Alpha 2026

Statistical Analysis Snapshot | 2026-09-02 | Fully synthetic dataset

Purpose and scope

This internal demonstration reports a wholly synthetic 48-case snapshot. No real people, clinical records, or patient-identifiable information are represented. Results are analytical examples only and are not medical advice.

Measure	Result
Synthetic cohort	48 cases; 24 intervention / 24 control
Dose threshold	2.5 mg
Day-28 mean change	-4.8 intervention; -2.1 control points
Model-adjusted difference	-2.7 points (95% CI -4.1 to -1.3)
Safety overview	7 non-serious AEs across 6 cases; 0 SAEs

Analysis method

The endpoint is Day-28 symptom-index change. The model-adjusted contrast is the intervention mean minus the matched-control mean. The reported model-based 95% interval uses a prespecified half-width of 1.4 points. Reproduction files include transparent input data, Python, Rust, notebook, and workbook calculations.

Interpretation boundary

The negative contrast is an illustrative numerical finding in this fabricated workspace. It does not establish efficacy, safety, dosing, or treatment guidance.

Appendix: audit trail and safety count

Reproducibility notes

Snapshot anchor: Sakura Clinical / Study Alpha 2026 / 2026-09-02. The CSV contains 48 synthetic case IDs and no demographic, contact, site, laboratory, or medical-record attributes. The source code recomputes group means, allocation counts, the adjusted difference, and safety totals.

Safety category	Count	Notes
Non-serious AE events	7	Across six synthetic cases
Serious AE events	0	No serious events recorded
Event terms	7	Headache; nausea; injection-site discomfort; fatigue; dizziness; rash; diarrhea

Quality-control checks

Allocation: 24/24. Threshold: all 48 rows reference 2.5 mg. Means: -4.8 and -2.1 points. Difference: -2.7 points. Interval: -4.1 to -1.3 points. Safety: 7 non-serious events, six unique cases, zero SAEs. These checks are re-stated in the companion workbook and executable files.

Data provenance

Generated as a fictional study snapshot for a persona corpus. This report contains no external citations, participant data, or clinical recommendations.
