

Client Beta operations export summary

Portfolio-linked working summary | Summit Vale Advisory | 13 Jul 2026

Purpose

Scope and portfolio context

This document describes the operational export prepared for Client Beta. It is a portfolio-linked view: it shares the Summit Vale Advisory governance cadence while retaining Client Beta ownership, decisions, and source records.

How to use this export

Start with records marked Needs decision or At risk, confirm the named owner and due date, then use the open-requests file to record any data gap. The export is designed for coordination, not performance evaluation.

Operational signals

Area	Export signal	Use in review	Owner
Service operations	Open dependency count	Sequence working sessions	Mina Okada
Process design	Decision readiness	Confirm gate evidence	Ryo Kanda
Change adoption	Interview response rate	Plan follow-up outreach	Aya Fujimoto
Data readiness	Requested extract status	Prioritize validation	Toru Seki
Portfolio oversight	Milestone confidence	Escalate only material risk	Portfolio PMO

What is excluded

This summary does not include personal interview content, employee data, credentials, supplier pricing detail, or source-system access information.

Controls for the weekly review

Four review checks

Check	Question	Expected outcome
Completeness	Is every record tied to an owner?	Unassigned items are flagged
Currency	Does the date reflect the current download?	Stale items are refreshed
Consistency	Do status labels match the guide?	Comparable portfolio view
Escalation	Is there a decision deadline?	Focused action in weekly review

Status meaning

Open means work is active. Pending client means a response is required outside the advisory team. Needs decision means a named decision-maker is required. Closed means the evidence or response has been logged.

Portfolio linkage

Use portfolio roll-up fields only for cadence and prioritization. Client Beta operational records should not be combined with Client Alpha finance measures or budget values.
