

Meeting export cover sheet

Weekly portfolio working session | Summit Vale Advisory | 13 Jul 2026

Purpose

Session purpose

This cover sheet indexes the working exports for the 13 July portfolio session. The meeting outcome is a short, owned set of next actions; the package should not be treated as a client deliverable or a system-of-record replacement.

Included files

Package item	Purpose	Primary reader
Download register	Provenance of received files	Portfolio PMO
Client Alpha open requests	Finance and data follow-up	Client Alpha team
Client Beta open requests	Operations and dependency follow-up	Client Beta team
Interview response tracker	Outreach planning and consent status	Change lead

Suggested agenda

1. Confirm provenance (5 min). Check the download register and export dates.
2. Resolve decisions (20 min). Review items with a deadline or decision dependency.
3. Assign follow-up (15 min). Confirm owner, due date, and closure evidence.

Working norms

Use the named synthetic team roles in the exports. Keep client-specific decisions in their respective files. Record requests as requests, not as inferred facts.

Closeout checklist

Before the session ends

Confirm that each discussed item has a status, one accountable owner, a due date, and a requested evidence type. Keep open items in the relevant client request file.

After the session

The portfolio PMO refreshes the download register, owners update their request records, and the change lead updates outreach status. Escalate only matters that affect the next decision gate.

Information handling

The files are internal working exports. Do not add personal contact details, credentials, contract attachments, or raw interview narratives to the package.
