

Phase 2 Data Dictionary

As of 2026-07-13. Client Beta Phase 2 is a fictional operations and finance data-room engagement. Named staff are synthetic: Avery Calder, Nina Solberg, Theo Mercer, and Keiko Ward.

Scope

This dictionary standardizes the small evidence set for Phase 2. It distinguishes source-visible values from analyst-derived observations and indicates the intended unit for each field.

Core fields

Source-visible fields should be captured exactly, retaining scan filename and as-of date. Derived fields should state the formula and be marked working only.

Field	Definition	Unit / type	Source
Scheduled units	Units planned for the reporting week	whole units	Production summary
First-pass yield	Units accepted without rework divided by units processed	percent	Production / quality
Downtime	Production time unavailable to planned work	hours	Production summary
Actual cost	Recorded cost by cost center	USD	Factory cost ledger
Hold disposition	Current treatment of a quality hold	controlled text	Quality hold log

Quality rules

Use ISO dates where a date is present. Preserve signed variances. Do not replace a blank source cell with zero. Synthetic people names identify coordination roles only and do not represent employees.

Lineage and retention

Every normalized row must retain source filename, page number, capture date, and reviewer. Source images are image-only scans awaiting OCR or manual capture; OCR output is not authoritative until checked against the rendered page.
