

Study Alpha - Personal Summary

Orchid Cellworks | Cohort A-24 | Baseline 2026-07-13 | Windows laboratory workstation review copy

Purpose and decision context

This synthetic personal summary consolidates the baseline immunoassay check for Study Alpha cohort A-24. The source run was reviewed on a Windows laboratory workstation after local instrument export and before study-drive handoff. The result is a planning signal only: it supports continued analysis preparation and does not represent clinical interpretation or a participant record.

Study	Study Alpha
Cohort	A-24
Baseline date	2026-07-13
Assay readout	6.8 ng/mL
Review disposition	QC pass; analysis-ready

Run overview

A sandwich immunoassay plate was prepared with synthetic study controls, a standard curve, and the A-24 cohort batch. The workstation review recorded a calculated cohort-level assay value of **6.8 ng/mL**. Plate-reader verification and reagent readiness checks were recorded before the export was staged. The internal QC note recorded a standard-curve fit of $R^2 = 0.998$ and no workflow deviations requiring repeat preparation.

Quality checks

Checkpoint	Observed status	Interpretation
Plate reader verification	Complete at 450 nm	Suitable for baseline read
Standards and controls	Within acceptance window	Curve may support analysis
Pipette readiness	Calibration check recorded	No handling exception logged
Export review	Delimited fields reconciled	Windows handoff package consistent

Interpretation boundary

The 6.8 ng/mL value is retained as a synthetic cohort-level research measurement. It is not a diagnostic result, not patient information, and not a release criterion. The intended next action is analytical comparison against the predefined study window after the secondary verification worksheet is checked.

Next actions

1. Retain the instrument export in the Study Alpha analysis workspace.
2. Reconcile the assay checks workbook with the final reviewer note.
3. Confirm cohort A-24 is labeled consistently in the analysis notebook.
4. Stage a brief research-plan update for the next internal review.
5. Keep this summary with the Windows workstation handoff material.
