

Orchid Cellworks — Study Alpha A-24

Grant Application Internal Review | 2026-07-13 | Fictional research corpus

Review purpose

This internal review assesses whether the proposed verification package is coherent, measurable, and adequately controlled before resource release. It covers only synthetic coded records OCW-A24-001 through OCW-A24-024 and makes no clinical claim.

Evidence reviewed

Item	Review finding	Disposition
Specific aims	Three aims map to measurable QC gates	Accept
Research strategy	Protocol and run ID are consistently referenced	Accept
Analytical criteria	6.8 ng/mL; CV $\leq$ 10%; recovery 90–110%	Accept with monitoring
Budget model	Milestone releases are formula-linked and transparent	Accept
Risk register	Precision, recovery, and documentation risks have triggers	Accept

Required actions before submission

1. Confirm the final verification schedule and assay material availability. 2. Lock the calculation template before the first confirmation run. 3. Escalate any CV or recovery exception through the review-actions log. 4. Reconcile actual costs against milestone release limits.

Recommendation

Proceed to controlled verification, contingent on protocol lock and documented QC acceptance. This recommendation is for fictional planning only and is not authorization for clinical use.
