

Lab Meeting Readout: Study Alpha A-24

Orchid Cellworks | 2026-07-13 | Synthetic research review | Windows lab workstation

Readout: The synthetic Study Alpha A-24 package met its stated review criteria. This document records a fictional methods discussion only; it does not communicate clinical, production, or real laboratory results.

Review snapshot

Reference	Observed synthetic summary	Review status
Median assay target	6.8 ng/mL	Carried forward as the A-24 reference
Duplicate precision	CV at or below 10%	Within criterion
Recovery	90-110%	Within criterion
Traceability	OCW-BIO-017; ALPHA-A24-R03	Documented for methods follow-up

What the team agreed

The fictional cohort includes OCW-A24-001 through OCW-A24-024. The group agreed to preserve that complete identifier span in the review index, carry the 6.8 ng/mL median into the methods workshop, and use the duplicate-CV and recovery bands as explicit text checks in the next readout.

Cross-study context

Study Beta B-16 was reviewed as a limited comparator: normalized baseline **1.00** and treated value **1.18**. That context supports the program discussion but does not change the Study Alpha A-24 methods conclusion.

Next actions

Action	Owner	Due date
Publish synthetic methods workshop notes with assay and QC criteria.	Methods Lead	2026-07-15
Confirm identifier continuity in the A-24 review index.	Data Steward	2026-07-16
Bring Alpha/Beta context note to program review.	Program Coordinator	2026-07-17

Fully synthetic Orchid Cellworks corpus artifact. No PHI, PII, credentials, secrets, or real data are included.
