

# Study Beta B-16 Analysis Report

Orchid Cellworks | 2026-07-13 | wholly synthetic internal analysis

## Executive readout

The synthetic B-16 dataset contains 16 fictional records. The observed treated mean is 1.136 normalized response against a baseline of 1.00 and a planning target of 1.18.

| Metric            | Value    | Interpretation                    |
|-------------------|----------|-----------------------------------|
| Synthetic records | 16       | Complete planned cohort           |
| Baseline          | 1.00 AU  | Reference normalization           |
| Treated mean      | 1.136 AU | +0.136 observed delta             |
| Planning target   | 1.18 AU  | Target remains a review threshold |

## Methods

Synthetic IDs OCW-B16-001 through OCW-B16-016 were assessed under run BETA-B16-R02. Values are normalized to the fictitious baseline, then summarized as a mean and delta.

## Quality control

Duplicate CV is 6.2%, below the pre-defined 10% threshold. Workbook formula scan reports zero errors.

## Interpretation and actions

The evidence supports method-review discussion only. Archive the synthetic inputs, retain the QC threshold, and document changes before any subsequent synthetic rerun.

Boundary: all Study Alpha/Beta records, samples, values, and identifiers are fictional. This artifact contains no PHI, PII, secrets, credentials, or real research data.
