

Scope

Orchid Cellworks synthetic Study Beta B-16 instrument export bundle. Reference date 2026-07-13. This document defines fields without representing clinical or participant data.

Record identifiers

`synthetic_sample_id` is an opaque synthetic label such as OCW-B16-001. `well` is a plate coordinate. `run_id` is BETA-B16-R02. These are simulation-only values.

Measurement fields

`baseline_signal_au` and `treated_signal_au` are numeric arbitrary units. `fold_change` is treated divided by baseline, with baseline normalized near 1.00 and treated target 1.18.

Quality fields

control readings, incubation observations, and flags support synthetic operational review. Encoding is UTF-8 and all delimiter files are rectangular.

Cross-study reference

Study Alpha, cohort A-24, and assay 6.8 ng/mL are calibration-reference anchors only; they do not appear as Study Beta source records.
