

Team-shared research readme

Synthetic working note | Linden Archive Project | Haldenmere Civic Repository

Purpose

This team-shared folder holds synthetic orientation material for the Linden Correspondence Series. It is a fictional research corpus prepared for M1 production and does not represent a real archive, person, collection, or research record.

Reference frame

The common reference is **Box 14, folio 184**, with the working citation **LA-042**. The coordination date is **2026-07-13**. Treat these labels as internal synthetic anchors, not as source identifiers outside this corpus.

What the companion scans show

File	Use in team review
team-meeting-whiteboard-scan.pdf	Open questions, handoff sequence, and a review timeline.
source-comparison-printout-scan.pdf	Variant comparison between synthetic transcriptions.
citation-audit-markup-scan.pdf	A visual trace of the internal citation check.

Review protocol

Use the whiteboard scan to locate the team question, compare the marked printout against the stated folio reference, then use the audit display to confirm that LA-042 stays connected to the same synthetic context. If a note conflicts, record the conflict as an editorial question rather than treating it as evidence.

Boundary

All people, wording, citations, and repository context in this folder are invented. No personal data, credentials, secrets, patient data, or live collection metadata are included.
