| Schedule      | Cutover 2026-09-14   Closeout 2026-09-18                       |
| Objectives    | RPO 5m   RTO 45m                                               |
| Base evidence | operations/migration-notes/migration-wave-yaml-src-002448.yaml |

## Operational reading

Wave 2 advances reporting-api with a snapshot, ordered replay, route switch, and restore rehearsal. The service set for this wave is event-bus, observability, contract-registry. The evidence must show replay age within the recovery-point target before routing changes.

## Acceptance sequence

|   |                                                                           |
|---|---------------------------------------------------------------------------|
| 1 | Capture and reconcile the source snapshot.                                |
| 2 | Verify ordered replay and the recovery-point objective.                   |
| 3 | Confirm the cutover route has a single active writer.                     |
| 4 | Record restore rehearsal evidence and close on the scheduled review date. |

## Closeout statement

The 2026-09-18 review records the verified operational evidence for the 2026-09-14 cutover. This document uses only synthetic program facts and contains no private systems or customer records.
