

Product Alpha Change Summary

ForgeLine | ECO-026 | Controlled summary dated 2026-08-11

Purpose

ECO-026 updates the Product Alpha locator control to maintain a dimensional tolerance of ± 0.18 mm. The change is linked to containment and verification activities for NCR-026.

Implementation controls

Control	Required evidence	Release condition
Fixture setup	Recorded locator study	Measured variation within tolerance
Inspection plan	Revised IP-ALPHA-07	NCR-026 checkpoint active
Work instruction	Acknowledged WI-ALPHA-21	Operators trained before use
Verification	Three-lot test record	Quality Engineering closure review

Decision and next review

The change may proceed only under conditional approval. The release gate remains closed until all evidence is complete and the Product Alpha verification confirms continued conformity to the specified tolerance.

Synthetic record. No real supplier, person, facility, or contact data is included.
