

Product Beta control-plan alignment

ForgeLine | Product Beta | Review date 2026-08-11 | Reference NCR-026 | Critical tolerance ± 0.18 mm

Purpose

This document aligns FMEA actions with the Product Beta control plan and release evidence.

Decision summary

The synthetic review maintains the same control framework as Product Alpha. No real product, supplier, facility, individual, or production record is represented. Risks remain open until objective verification evidence is linked to the closure register.

Control topic	Evidence expectation	Disposition
Interface fit	Dimensional check against ± 0.18 mm requirement	Open
NCR-026 linkage	Traceability review at release gate	In review
Action closure	Objective evidence in closure register	Required

Review notes

The interface-fit control is evaluated at ± 0.18 mm. NCR-026 is retained as a synthetic traceability reference. Product Beta action owners must confirm dimensional verification, configuration linkage, and release evidence before residual-risk acceptance.
