

Supplier Follow-up Report

Synthetic closure check for the ForgeLine quality training set

Verification performed

On 2026-08-11, the simulated follow-up checked whether the Product Alpha control sequence named NCR-026 retained the ± 0.18 mm criterion.

Result

The synthetic evidence package shows a revised link between audit observation, containment statement, and the planned effectiveness review. The result is suitable only for fictional training content.

Next review

A quality reviewer will compare the updated record with the control-plan reference during the next internal cycle.
