

Aegis Control AC-27 evidence handling

RISK-031 | Review date 2026-07-13 | Internal synthetic record

Purpose and bounded review

The review sampled receipt-to-register linkage for closed assurance packages. A paperless custody card accompanies each fictional package, but a small set of cards names the preparer without recording the independent acceptance decision.

Review boundary

The review boundary was aegis evidence vault, its fictional governance documentation, and a constrained evidence sample identified as evidence set 184. It excluded production access, active discovery, credential use, payload delivery, and any claim about actual security conditions.

Observation register

Traceability observation	Why it matters	Defensive response
The review sampled receipt-to-register linkage for closed assurance packages. A paperless custody card accompanies each fictional package, but a small set of cards names the preparer without recording the independent acceptance decision.	An acceptance decision that lives only in meeting notes weakens reconstruction of custody. The risk is delayed audit confirmation, not an allegation of exposure.	Bind the acceptance record to the package identifier; the verifier will confirm that every sampled card has a separate reviewer and dated conclusion.
Ownership is assigned to evidence operations lead, but the review should preserve a clear verifier conclusion alongside the operational record.	A separate assurance conclusion makes later review repeatable without relying on oral context.	Evidence operations lead will nominate a verifier outside the preparation step and retain that conclusion with evidence set 184.

Risk interpretation

An acceptance decision that lives only in meeting notes weakens reconstruction of custody. The risk is delayed audit confirmation, not an allegation of exposure. The assessment therefore prioritizes a documentary correction that can be tested without accessing the protected workflow.

Safety statement

This is wholly synthetic GRC/audit material. It documents defensive assurance concepts only and contains no live scan results, exploit sequence, target address, personal data, or secret.

Aegis Control AC-27 evidence handling

Control reference RISK-031 | Evidence reference evidence set 184

Corrective path

Bind the acceptance record to the package identifier; the verifier will confirm that every sampled card has a separate reviewer and dated conclusion. The accountable role is evidence operations lead; its first task is to make the decision path understandable from the aegis evidence vault without consulting unrelated notes.

Verification criteria

Verifier test	Expected proof	Disposition trigger
Trace one sampled record from governance entry to evidence conclusion.	A dated, attributable decision with the relevant review context.	Return for correction if the reviewer role or timing cannot be established.
Compare the updated record to the stated control purpose.	A response that resolves the documented traceability concern.	Escalate to routine risk governance if the action is deferred.

Decision logic and residual conclusion

The review sampled receipt-to-register linkage for closed assurance packages. A paperless custody card accompanies each fictional package, but a small set of cards names the preparer without recording the independent acceptance decision. Residual concern is low after linkage is made visible because the underlying package inventory is complete.

Action context

An acceptance decision that lives only in meeting notes weakens reconstruction of custody. The risk is delayed audit confirmation, not an allegation of exposure. Bind the acceptance record to the package identifier; the verifier will confirm that every sampled card has a separate reviewer and dated conclusion.

Provenance and limitation

Cobalt Harbor Systems prepared this as a fictional, defensive training artifact. evidence set 184 is synthetic. The record is a point-in-time documentation assessment and does not attest to effectiveness of any real endpoint, service, person, partner, account, or network.

Sign-off

Prepared by Security/GRC analyst (synthetic persona); quality review to be recorded by an independent synthetic assurance role.
