

Calibration Analysis: run R184

Probability alignment at the decision boundary.

ECE 0.031 | selected threshold 0.68

Scope

Equal-frequency bins compare stated confidence with empirical correctness. Central bins track the reliability diagonal; the upper bin is modestly conservative.

Interpretation

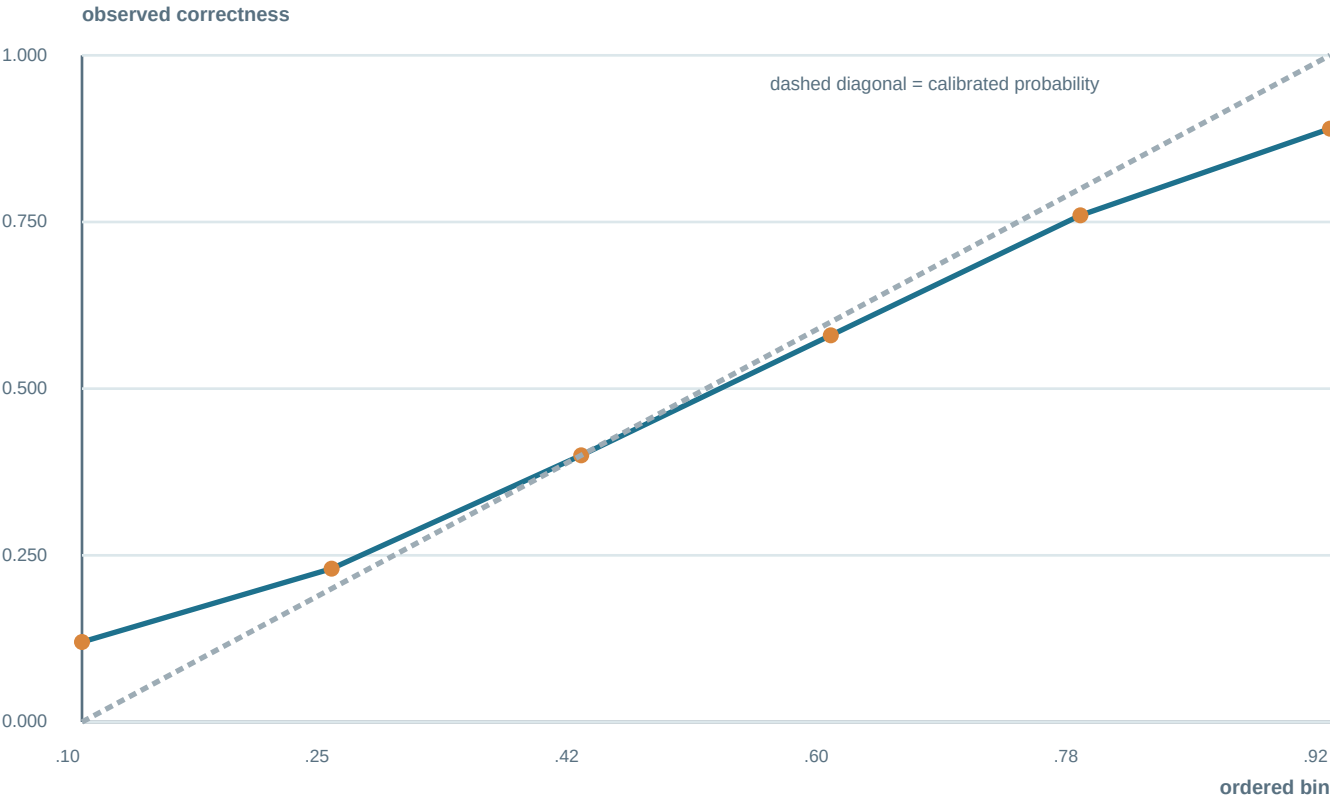

The threshold is a routing policy: lower-confidence records are reviewed rather than forced into an intent.

Decision evidence

confidence	observed rate	gap
.10-.25	.23	.02
.25-.42	.40	.02
.42-.60	.58	.02
.60-.78	.76	.02
.78-.92	.89	.03

Reliability curve

Topic-specific analytical figure for the same synthetic R184 record.

Interpretation:

ECE 0.031 summarizes the plotted confidence gaps; the diagonal is the reference.
