

Experimental Protocol: Helix Forge R184

Pre-specified synthetic-only evaluation sequence.

one held-out pass | no live data

Scope

Helix Forge Lab freezes HF-Eval-S1/S2 v3.2 before candidates are fit. Threshold selection is completed without consulting held-out scores.

Interpretation

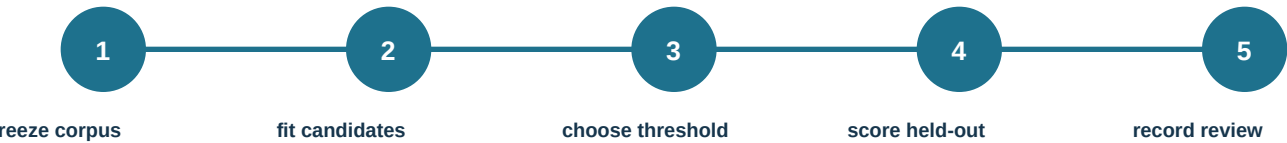

Every phase creates a lock condition and recorded decision, preserving a compact audit trail.

Decision evidence

phase	artifact	decision rule
freeze	manifest	version v3.2
fit	candidate bundle	no evaluator edits
select	threshold memo	development only
score	metric card	one pass
review	error log	retain evidence

Five-phase timeline

Topic-specific analytical figure for the same synthetic R184 record.

Interpretation:

The sequence keeps held-out outcomes out of threshold selection.
