

Confidence Intervals: Model Alpha M-14

Resampling uncertainty for a bounded evaluation.

macro F1 0.873 | 95% CI 0.857–0.888

Scope

Stratified bootstrap resampling preserves representation of every synthetic intent. The interval is corpus uncertainty, not a live-population forecast.

Interpretation

The band stays above the Beta B-07 point estimate 0.846 under this fixed protocol while still exposing uncertainty.

Decision evidence

statistic	estimate	95% interval
precision	.881	.866–.895
recall	.865	.849–.881
macro F1	.873	.857–.888
draws	200	stratified

Bootstrap distribution

Topic-specific analytical figure for the same synthetic R184 record.

bootstrap resamples (n=200)

Interpretation:

Orange markers bound the central 95% bootstrap interval for macro F1.
