

Class Balance Analysis: R184

Prevalence and macro-metric context for five labels.

five synthetic intent labels | macro averaging

Scope

The corpus is not class-balanced: route has 560 records and escalate 415. Macro F1 prevents category size from quietly determining the headline score.

Interpretation

No evaluation-time reweighting changes these counts; distribution remains evidence for interpreting slices and bootstrap samples.

Decision evidence

intent	records	share	F1
route	560	23.3%	.878
classify	510	21.3%	.872
verify	470	19.6%	.872
defer	445	18.5%	.870
escalate	415	17.3%	.871

Class-count bars

Topic-specific analytical figure for the same synthetic R184 record.

Interpretation:

Prevalence bars explain why macro metrics are retained alongside label evidence.
