

# Failure Mode Review: R184

Severity-oriented reading of consequential error shapes.

review-first handling | synthetic-only findings

## Scope

Failures are grouped by experience: plausible wrong assignment, ambiguity, evidence omission, and unstable confidence. Each has a distinct detection path.

## Interpretation

Plausible wrong assignments receive strongest review priority because they look convincing despite high impact.

## Decision evidence

| failure         | impact | mitigation      |
|-----------------|--------|-----------------|
| plausible wrong | high   | contrast review |
| ambiguity       | medium | route review    |
| omission        | high   | cue checklist   |
| confidence      | medium | recalibrate     |

# Impact-detectability map

Topic-specific analytical figure for the same synthetic R184 record.

**Interpretation:**

High-impact, less-detectable modes receive focused review.
