

Latency-Quality Trade-off: R184

Offline timing profiles on synthetic batches.

balanced: 88 ms median | macro F1 0.873

Scope

The timing harness measures offline batch scoring only, not a live service. Profiles score the same synthetic records with bounded compute budgets.

Interpretation

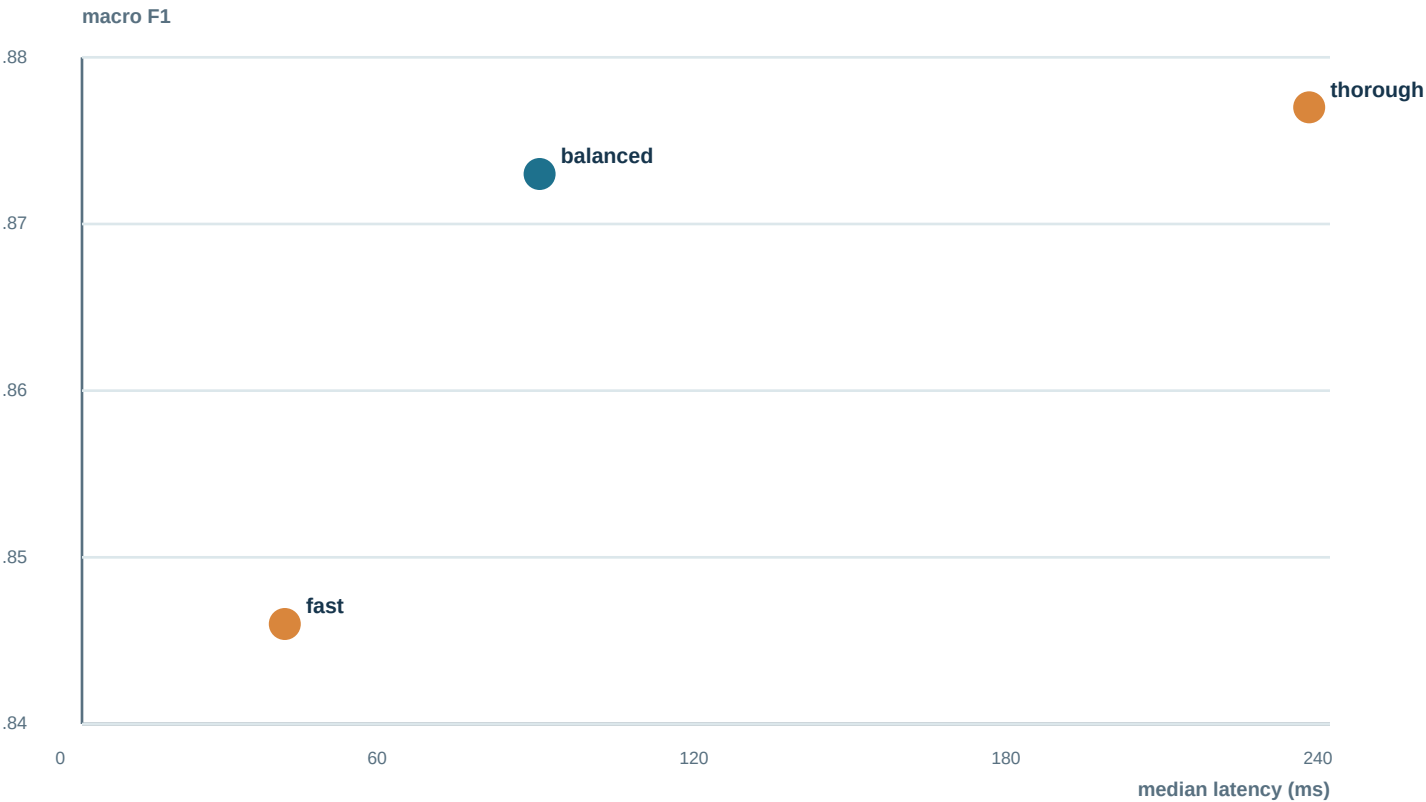

Balanced reaches 0.873 without the 236 ms median of thorough; the figure makes the Pareto choice explicit.

Decision evidence

profile	median	macro F1	selection
fast	39 ms	.846	speed bound
balanced	88 ms	.873	selected
thorough	236 ms	.877	marginal gain

Latency-quality Pareto

Topic-specific analytical figure for the same synthetic R184 record.

Interpretation:

Points form the offline Pareto trade-off; balanced is selected.
