

Model Governance Appendix: R184

Scope, evidence lineage, and bounded controls.

synthetic-only | documented limitations | retained evidence

Scope

This appendix records no live data, no individual records, and no deployment decision. It links corpus manifest, run record, metric card, and review note.

Interpretation

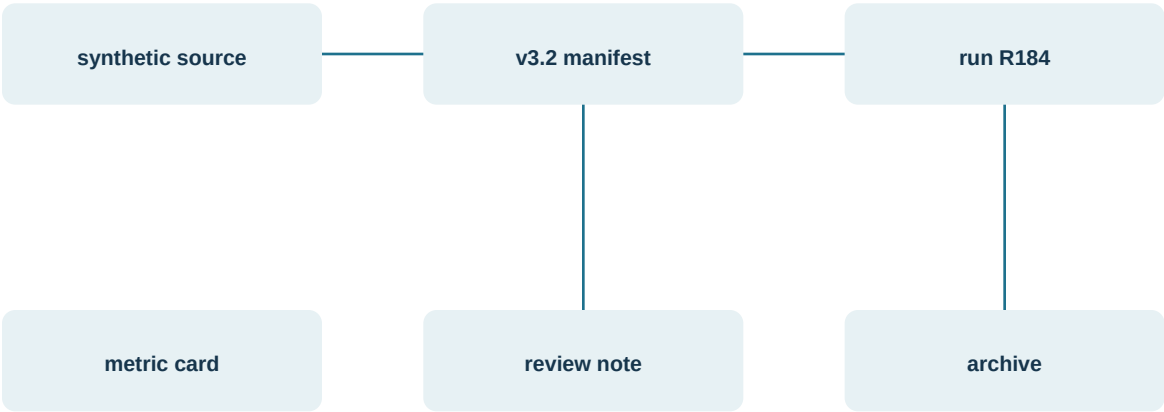

Governance is a chain of evidence: dataset definition, uncertainty summary, and error review travel with the metric.

Decision evidence

control	evidence	state
data boundary	synthetic note	confirmed
lineage	v3.2 → R184	linked
metric context	CI and slices	attached
review	error log	retained

Evidence lineage

Topic-specific analytical figure for the same synthetic R184 record.

auditable evidence lineage, synthetic-only scope

Interpretation:

Each node is an auditable handoff, not a deployment claim.
