

Robustness Slice Study: R184

Controlled wording and evidence-order stress tests.

baseline F1 0.873 | four synthetic stress slices

Scope

Each slice preserves intent while changing one surface property: brevity, late evidence, harmless distractors, or mixed modifiers.

Interpretation

Late evidence is the largest decline at 0.852, prioritizing ordering cues for the next corpus refresh.

Decision evidence

slice	records	macro F1	change
baseline	2,400	.873	reference
brief	320	.868	−.005
late evidence	320	.852	−.021
distractor	320	.864	−.009
mixed modifiers	320	.858	−.015

Stress-slice scores

Topic-specific analytical figure for the same synthetic R184 record.

Interpretation:

Late evidence is the clearest prioritized robustness gap.
