

Seed Sensitivity Analysis: R184

Distribution of controlled initialization effects.

six seeds | mean macro F1 0.873 | range 0.009

Scope

Six initializations share corpus, threshold, and scoring code. The dot strip shows variation without disguising it behind a central statistic.

Interpretation

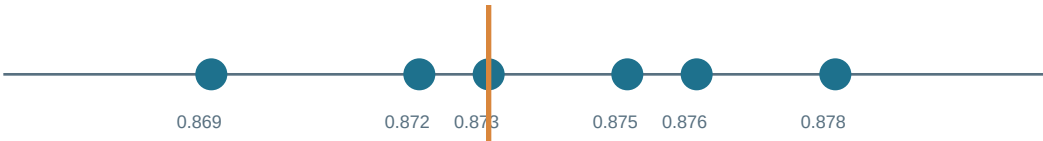

The 0.869–0.878 range is small relative to the Alpha–Beta difference but remains retained in the experiment record.

Decision evidence

seed	macro F1	deviation
s03	.869	–.004
s11	.872	–.001
s23	.873	.000
s37	.875	+.002
s41	.876	+.003
s59	.878	+.005

Seed dot-strip distribution

Topic-specific analytical figure for the same synthetic R184 record.

orange line = mean 0.873; range = 0.009

Interpretation:

The dot strip reports distribution shape; the orange mean is 0.873.
