

Beta integration tickets

Connection reliability themes

Tracked workspaces	352
Coded contacts	63
Contact rate	17.9%
Primary theme	Integration

Decision signal

Integration tickets concentrate around reconnect behavior and unclear sync state, not connector availability.

Gate impact: M-27 dependency review on 2026-08-28. Add reconnect state copy and a persistent last-sync timestamp before expanding templates.

Theme distribution

Share of coded contacts

Method: fully synthetic, aggregated support themes coded from simulated ticket summaries. Counts describe contacts, not unique people or accounts.

Analysis and operating recommendation

A support view for Product Alpha Q3

Severity and trend

Theme	Contacts	Share	Severity	Trend
Reconnect flow	24	38%	High	Rising
Sync status	17	27%	Medium	Stable
Field mapping	13	21%	Low	Stable
Rate guidance	9	14%	Low	Stable

Recommendation

Add reconnect state copy and a persistent last-sync timestamp before expanding templates.

Owner cue: Product and Support Operations should review the focus theme twice weekly until the M-27 decision. The 2026-09-18 gate should be treated as a rollout decision, not a promise of broad availability.

Limitations

This report uses intentionally synthetic aggregated tickets. It excludes customer names, organizations, contracts, authentication data, recordings, and free-form transcripts. Trends are directional planning signals and are not a production support forecast.
