

Mobile notification feedback

Signal quality for mobile teams

Tracked workspaces	217
Coded contacts	39
Contact rate	18.0%
Primary theme	Notifications

Decision signal

Feedback is mainly about notification timing and duplicate alerts; fewer reports concern delivery failure.

Gate impact: M-27 experience checkpoint on 2026-09-04. Default to grouped alerts and expose quiet-hours status in the mobile settings panel.

Theme distribution

Share of coded contacts

Method: fully synthetic, aggregated support themes coded from simulated ticket summaries. Counts describe contacts, not unique people or accounts.

Analysis and operating recommendation

A support view for Product Alpha Q3

Severity and trend

Theme	Contacts	Share	Severity	Trend
Duplicate alerts	15	38%	High	Rising
Quiet hours	10	26%	Medium	Stable
Delay visibility	8	21%	Low	Stable
Delivery status	6	15%	Low	Stable

Recommendation

Default to grouped alerts and expose quiet-hours status in the mobile settings panel.

Owner cue: Product and Support Operations should review the focus theme twice weekly until the M-27 decision. The 2026-09-18 gate should be treated as a rollout decision, not a promise of broad availability.

Limitations

This report uses intentionally synthetic aggregated tickets. It excludes customer names, organizations, contracts, authentication data, recordings, and free-form transcripts. Trends are directional planning signals and are not a production support forecast.
