

Q3 support trends

Week-over-week support signal

Tracked workspaces	1,240
Coded contacts	178
Contact rate	14.4%
Primary theme	Onboarding

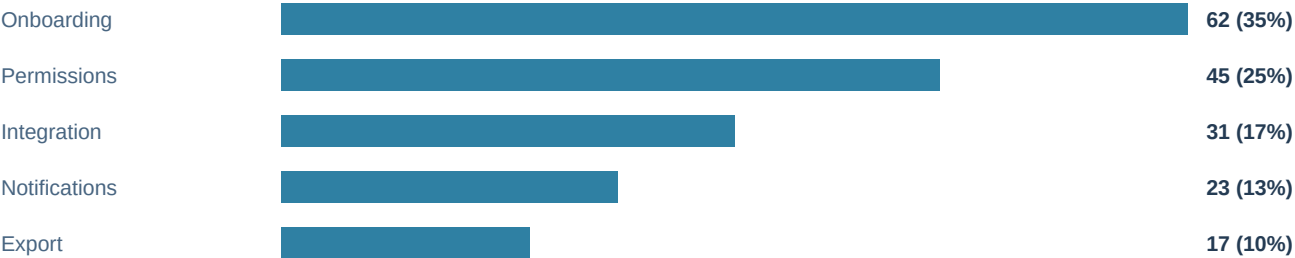

Decision signal

Total volume is stable while onboarding share declines; permissions severity remains elevated.

Gate impact: M-27 guided rollout gate on 2026-09-18. Use the M-27 gate to hold broad rollout unless permission blockers decline for two consecutive weeks.

Theme distribution

Share of coded contacts

Method: fully synthetic, aggregated support themes coded from simulated ticket summaries. Counts describe contacts, not unique people or accounts.

Analysis and operating recommendation

A support view for Product Alpha Q3

Severity and trend

Theme	Contacts	Share	Severity	Trend
Onboarding	62	35%	High	Rising
Permissions	45	25%	Medium	Stable
Integration	31	17%	Low	Stable
Notifications	23	13%	Low	Stable
Export	17	10%	Low	Stable

Recommendation

Use the M-27 gate to hold broad rollout unless permission blockers decline for two consecutive weeks.

Owner cue: Product and Support Operations should review the focus theme twice weekly until the M-27 decision. The 2026-09-18 gate should be treated as a rollout decision, not a promise of broad availability.

Limitations

This report uses intentionally synthetic aggregated tickets. It excludes customer names, organizations, contracts, authentication data, recordings, and free-form transcripts. Trends are directional planning signals and are not a production support forecast.
