

Product Council decision log

Product Alpha Q3 | established 2026-07-13 | M-27 guided rollout gate: 2026-09-18

Decision frame

Adoption starts at **18.4%** across **1,240 synthetic workspaces** and targets **26.0%**. M-27 is an evidence-based expansion decision, not a feature-complete date. The controlled pilot is limited to 120 synthetic workspaces.

ID	Decision	Record
DR-081	Freeze adoption definition	Eligible admin completes guided first outcome within seven days of enablement. Keep the 1,240-workspace baseline denominator fixed; report pilot cohorts separately.
DR-082	Run 120-workspace pilot	Use a controlled, reversible cohort before M-27. Do not expand additional cohorts before evidence review.
DR-083	Require export-confidence gate	Expansion beyond pilot requires trusted-export evidence; it cannot be deferred as a follow-up enhancement.
DR-084	Default notifications to a weekly digest	Keep clear controls and observe preference changes and support-contact signals.
DR-085	Preserve pilot boundary	Keep the pilot at 120 workspaces pending M-27 evidence review.
DR-086	Instrument decision signals	Measure adoption, preference changes, permission-help exits, and export-preview completion without changing DR-081.
DR-087	Make Beta planning conditional	Product Beta Q4 may plan scenarios, but Alpha expansion remains conditional on M-27.
DR-088	Standardize Beta handoff	Include metric definition, pilot readout, notification result, and export-confidence disposition.

Decision log continued

M-27 controls and follow-through

ID	Decision	Record
DR-089	Define export-confidence evidence	Require export preview, permission acknowledgment, and synthetic usability evidence; completion alone does not pass DR-083.
DR-090	Protect metric semantics	Any guided-flow change retains the DR-081 adoption event and is documented in the M-27 packet.
DR-091	Choose expand, hold, or rollback	M-27 authorizes no automatic expansion based on a single metric.
DR-092	Separate evidence lines	Present adoption movement, export-confidence disposition, notification/access signals, and rollback readiness separately.
DR-093	Hold broad expansion	Following the 2026-09-18 review, keep the 120-workspace pilot unchanged until the evidence bundle is complete.
DR-094	Keep Beta dependency conditional	Product Beta Q4 consumes the DR-088 handoff; it does not assume approved Alpha expansion.

Operating notes

The decision record is intentionally role-based and synthetic. It contains no individual names, customer data, recordings, or personal information. Open matters: final pilot measurement, export-confidence disposition, and the material-regression threshold for access-related support contacts.
