

Product Alpha Q3 PRD Approval Brief

Decision brief | Baseline 2026-07-13 | M-27 guided rollout gate: 2026-09-18

Decision requested	Approve controlled guided rollout and M-27 exit criteria
Population	1,240 eligible workspaces
Outcome target	Adoption: 18.4% baseline to 26.0% Q3 target
Safety bar	No unresolved critical authorization or accessibility defects
Rollback	Disable cohort entry points; preserve setup state and audit records

Why now

New owners do not consistently reach a shared first workflow. The Q3 release focuses on a reversible, role-aware path rather than broad platform expansion.

Approval scope

Guided setup, contextual invitations, admin permission review, governed event instrumentation, accessible states, and an explicit rollback control.

Decision rules

M-27 passes only when beta exit criteria are met: credible movement toward the 26.0% target, at least 62% setup completion, at least 45% invite acceptance, 99% event completeness, and permission contacts below 2.0 per 100 active workspaces.

Boundaries

No billing or trial changes, new persistent roles, workflow-builder redesign, historical migration, or content export are in scope.

Open decision

Approve one owner reminder at day three after incomplete setup, subject to notification permission and quiet hours. The council will review opt-outs alongside completion.

Approval record: Executive Team decision requested before controlled cohort expansion. All organizations, metrics, and examples are synthetic.
