Evidence reconciliation: 2026 07 13 Reliability Runbook Node Pressure Searchable Report Pdf Text

For 2026 07 13 Reliability Runbook Node Pressure Searchable Report Pdf Text, evidence docket p02-src-012916 / p02-full-012916 uses p02-full-001045 to compare consumer headroom with the 1,850 to 2,420 requests/s demand movement, with a specific lens on regional dependency context and containment. The review method is to reconcile source completeness before approving the closure statement. The evidence is scoped to documents/operations/runbooks, framed by svc.identity.svc23, rel.inc260713.timeline, date.2026-07-13, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 07 13 Reliability Runbook Node Pressure Searchable Report Pdf Text cites the current p02-full-001045 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Node Pressure review outcome without changing the fixed incident causality; apply the regional dependency context and containment lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; reconcile source completeness before approving the closure statement; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
