Decision review: 2026 07 14 Reliability Runbook Alert Triage Searchable Report Pdf Text

For 2026 07 14 Reliability Runbook Alert Triage Searchable Report Pdf Text, evidence docket p02-src-011317 / p02-full-011317 uses p02-full-000385 to connect Q-07 thresholds and burn-rate signals to the declared S2 decision, with a specific lens on owner handoff and escalation precision. The review method is to treat the component-specific control as a follow-up, not a cause. The evidence is scoped to documents/operations/runbooks, framed by svc.identity.svc23, rel.inc260713.timeline, date.2026-07-14, and evaluated to accept only timestamped operational evidence. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Identity On-Call: confirm that 2026 07 14 Reliability Runbook Alert Triage Searchable Report Pdf Text cites the current p02-full-000385 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Alert Triage review outcome without changing the fixed incident causality; apply the owner handoff and escalation precision lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: accept only timestamped operational evidence; treat the component-specific control as a follow-up, not a cause; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
