Decision review: 2026 07 14 Reliability Runbook Database Failover Searchable Report Pdf Text

For 2026 07 14 Reliability Runbook Database Failover Searchable Report Pdf Text, evidence docket p02-src-005889 / p02-full-005889 uses p02-full-001701 to evaluate PG-04 failover evidence without introducing a second incident cause, with a specific lens on critical-path chronology and action ownership. The review method is to verify each mitigation step has a later recovery observation. The evidence is scoped to documents/operations/runbooks, framed by svc.checkout.svc17, rel.inc260713.timeline, date.2026-07-14, and evaluated to retain the scope boundary in every action assignment. The removed queue-pressure guardrail allowed demand to exceed consumer concurrency; retry amplification increased Q-07 and produced Checkout latency and failures. Identity was load-degraded only, never the initiating cause.

Assigned actions

1. Checkout Operations: confirm that 2026 07 14 Reliability Runbook Database Failover Searchable Report Pdf Text cites the current p02-full-001701 hash before distribution.
2. Platform Reliability and Checkout Operations: record the Database Failover review outcome without changing the fixed incident causality; apply the critical-path chronology and action ownership lens and retain the row-specific scope documents/operations/runbooks in the review record.
3. Platform Reliability: retain the scope boundary in every action assignment; verify each mitigation step has a later recovery observation; preserve the causal chain from removed queue-pressure guardrail through demand exceeding consumer concurrency and retry amplification to Q-07 and Checkout latency and failures; record Identity as load-degraded only, never the initiating cause.
